

PRESS RELEASE:

New ethanolfacts.eu website launches

Online resource answers common questions about renewable ethanol and sustainable biofuels

BRUSSELS, 6 November 2018 – [Ethanol Facts](#), a new online resource for information about renewable ethanol, launched today as part of an effort to help inform the public about the production, use, sustainability and importance of ethanol as a renewable fuel.

The [ethanolfacts.eu](#) website has been created by ePURE, the European renewable ethanol association, as a one-stop-shop for information about ethanol. In the EU, renewable ethanol helps reduce harmful emissions from cars, contributing to the fight against climate change and the drive for clean mobility.

“Renewable ethanol helps reduce harmful emissions from cars, contributing to the fight against climate change and the drive for clean mobility,” said Emmanuel Desplechin, Secretary-General of ePURE. *“We believe [ethanolfacts.eu](#) can help provide answers to many of the most common questions people have, and clear up some of the misinformation that is out there.”*

As part of a broader campaign to engage with citizens on the subject of renewable ethanol and the fight against climate change, ePURE has also launched a new Twitter account, [@ethanolfacts](#).

ABOUT ePURE: ePURE represents the interests of European renewable ethanol producers to the EU institutions, industry stakeholders, the media, academia and the general public. Based in Brussels, ePURE speaks for 34 member companies (including 20 producing members), with around 50 plants in 16 EU member states, accounting for about 85% of the renewable ethanol production in Europe. The organisation, established in 2010, promotes the beneficial uses of ethanol throughout Europe.
