Spain	Energy	9.5	0.1 (indicative)	-	-	-
Sweden		-	-	-	-	-4.2 for petrol <sup>12</sup> -21 for diesel <sup>12</sup>
UK	Volume	10.1 <sup>13</sup>	0.5	-	-	-

\* After double counting

<sup>1</sup> Until 1 Jul. 2021, the use of palm oil is limited to 2019 levels, then it will be phased out.

<sup>2</sup> Blending obligations should not apply to RON 98 petrol fuel.

<sup>3</sup> Double counting of advanced biofuels is not possible anymore in 2021.

<sup>4</sup> In addition to the ineligibility of palm-based biofuels, soy is capped at 0% for biofuels blended in petrol and 0.7% in diesel.

<sup>5</sup> Of which at least 0.5% reserved to advanced biofuels other than biomethane.

<sup>6</sup> For RON 95 and RON 98 petrol fuel respectively.

<sup>7</sup> With exception in winter.

<sup>8</sup> Optional for 98 octane petrol.

<sup>9</sup> 9.7% after double counting. Advanced biofuels must represent at least 50% of the biofuels mix after double counting.

<sup>10</sup> UER can no longer be used for compliance with art. 7a of the FQD.

<sup>11</sup> According to a draft decree.

<sup>12</sup> According to a draft decree under discussion, these levels will be maintained until 31 Jul. 2021, then 6% for petrol and 26% for diesel.

<sup>13</sup> The cap on crop feedstock decreased from 4% to 3.83% in 2021.
